

KOCO PACKAGING MACHINERY CO.,LTD

1000L/H water treatment equipment

Technical parameter :

MODEL	RO-1
CAPACITY	1000L/H
VOLTAGE	380V/50Hz
POWER(KW)	2.5KW
RECOVERY RATE	≥50%
DIMENSION	1870*1250*1850

The machine can be customized, and can provide supporting parts and packaging materials for a long time.

Introduction to the machine :

The function of water treatment equipment is to filter unfiltered well water or river water and other fresh water resources into pure water that can be directly drink. The equipment is usually used in beverage factories, food factories, hotels, schools and other places. The equipment is composed of quartz sand filter, activated carbon filter, resin filter, RO membrane, PP cotton filter element, and UV sterilization equipment. The whole set of equipment can effectively filter out 99% of impurities such as visible particles, harmful minerals, and microorganisms in the water. The equipment has the remarkable characteristics of low energy consumption, no pollution, simple process, high water quality, simple operation and long service life.
